

# iTouch - Biometric Fingerprint ID device System

## Experience the latest innovation in car security and driver ID

Experience the latest innovation in car security and driver ID: use your fingers to enable car driving or driver ID for fleet management, log and reports.

The newest BIOMETRIC finger print iTouch device is designed to meet the automotive environment. iTouch can interface with most iTrack immobilizers and alarm systems to achieve an ultimate anti-theft package.

For emergency and other scenarios, a common cellular phone (needs the MASTER password) could be used to enable a temporary "one-time" person, using your vehicle.

### Main features:

- Auto arming: 30 sec. from ignition switch "OFF".
- Operates in extreme environment conditions.
- Dashboard installation using a swivel mounting bracket.
- LED and buzzer to signal system status/mode.
- Speed limit per user (optional).
- USB socket.
- Provision for connecting wire/wireless RF anti-theft cut unit(s).
- Up to 10 fingerprint memory.
- Programmable Valet/Service mode.
- DTMF communication link for programming service mode. (allows the use of any common cellular phone)
- Immobilizer and a driver ID device.
- Fingerprint IDs are fully protected against stolen identity.
- Stand alone solution.
- Fingerprint is read from live tissue (dermis) layer and is unaffected by cuts or dirt on fingers.
- Programmable authorized users.
- User friendly and easy fitting.
- internal battery back-up.
- Interfaces with peripheral devices such as immobilizers, alarm systems, fleet management, AVL, etc.

### Accessories:

- ALARM SYSTEMS: interfaces with iThunder alarm units.
- FLEET MANAGEMENT: for driver ID applications and reports.
- IMMOBILIZER: interfaces with iTrack's wireless/wired cut-units.

### Technical features:

- Operation voltage: 12Vdc.
- Operation temp: (-40) (+85)'c.
- Accuracy: 99.9%
- Package: robust, scratch resistant.
- ESD protected.
